ANCAP Image and Prototype Creation

Project Description

CH2M HILL Lockwood Greene created a new image and prototype for ANCAP, the largest oil company in Uruguay.

ANCAP is the state-owned and largest oil company in Uruguay. ANCAP owns the only refinery in this country with 3.5 million residents.

Other oil companies in Uruguay either buy from ANCAP or import refined oil. ANCAP has over 200 filling stations located all over the country.

CH2M HILL Lockwood Greene has worked together with ANCAP and its distributor to develop a new image and prototype. The project included a technological upgrade and an improvement in environmental concerns. CH2M HILL Lockwood Greene carried out the site adaptation for the new stations, as well as complete or partial renovation of existing stations, the detailed design, and construction management for over 120 stations all over the country. A dedicated office was established to accomplish this large undertaking.
